

Type 862 – the seat that disappears

Our most flexible M1 tip seat. The seat can be folded and turned parallel with the wall of the vehicle so that it takes up a minimum of space. This facilitates a wide variety of uses such as in connection with wheelchair accessible vehicles, and in ambulances, or anywhere else that space is limited.

The many uses of the seats and their flexibility ensure great profitability because they are always in the vehicle. An extra advantage of using these seats is that they improve the working environment as it is unnecessary for drivers to lift them into and out of the vehicle because they can simply be turned to the side.

Type 862 is a very comfortable tip seat equipped with an integrated headrest, a three point seat belt, and an adjustable back rest. It can be supplied with armrests, a swivel, two different under-frame heights for mounting on the floor, or with fittings to mount on the wheel arch.
